Diksha Chauhan

AI Automation Engineer

n8n | AI integrations | APIs and workflow engineering

dikshachauhan9201@gmail.com | +91 9217682198 | linkedin.com/in/diksha-chauhan-465559403 | India

PROFESSIONAL SUMMARY

AI Automation Engineer focused on n8n, multi-step workflow design, and practical integrations. Built 50+ workflows connecting APIs, webhooks, data sources, and AI services. Emphasis on clear validation, conditional routing, testing, maintainability, and human review where it matters.

EXPERIENCE

Independent AI automation projects | 2023 - Present

- Design and build workflow prototypes for lead intake, qualification, messaging, email, CRM updates, and data handling.
- Connect services with APIs and webhooks; add input checks, decision branches, notifications, and review steps.
- Test normal and exception paths, document workflow behavior, and keep consequential AI-generated actions reviewable.

SELECTED WORKFLOW PROJECTS

AI lead generation and qualification | Prototype
Collect and validate lead details, apply AI-assisted classification, and prepare a structured record and follow-up route. Tools noted in the project: Make.com, OpenAI, Google Sheets, Apify, Apollo, and Hunter.

WhatsApp AI chatbot | Prototype
Connect incoming messages to intent handling and an AI-assisted response path using WhatsApp API, webhooks, OpenAI, and Make.com.

AI email personalizer | Prototype
Prepare context-aware outreach drafts from lead information and pass them to a reviewable Gmail workflow using OpenAI, Google Sheets, and Make.com.

Voice AI assistant | Experimental
Explore a voice intake and response flow using Retell AI, OpenAI, and API integrations; treated as an experimental workflow, not a production deployment.

TECHNICAL SKILLS

Automation: n8n, Make.com, workflow design, webhooks, conditional routing, validation, testing
AI and integrations: OpenAI API, AI agents, WhatsApp API, CRM workflows, Google Sheets, Gmail, Google Calendar
Web and tooling: JavaScript, React, REST APIs, Git, GitHub, Vercel

EDUCATION AND CONTINUED LEARNING

Self-directed learning in AI automation and workflow engineering, including ongoing study of n8n, Make.com, OpenAI integrations, and automation best practices.
